Prevent Falls from Vehicles, Avoid Work at Height

Where unavoidable:

- Restrict access onto vehicles to necessary personnel only.
- Provide **on-vehicle** systems to prevent falls, such a collapsible handrails, fixed anti-slip steps & handholds.
- Provide **on-site** systems to prevent falls for example, provide platforms or gantries.
- Use collective protective measures such as soft landing systems or nets.
- Provide Personal Protective Equipment (PPE) as required for example, fall arrest equipment or restraint systems, appropriate footwear.
- Provide employees with proper instruction, information & training on the proper use of the systems & equipment.

These simple steps save lives.
